The Verse-al Lexicon

as a periodic table

136 terms · nineteen families · nine releases

Each column is a family: terms that behave alike, under one glyph and one colour. Each row is a release, so the table grows downwards as the language did.

A map, not a law. The families are assigned, not measured. Where a square is empty, nothing has been named there yet.

How to read a square

- **number** — its place in the order of arrival
- **glyph** — the family it belongs to
- **marks** — the registers it speaks in: ⊙ mechanic △ poetic ✶ speculative
- **word** — the headword, as the Lexicon gives it
